25X1

1. There is a radio installation located about one kilometer east of the eastern edge of Bratislava, north of the Bratislava-Prievoz (N 48-09, E17-11) road. The station bears signs of recent construction and cannot be more than two years old.
2. The station consists of:
 - a. A two-story brick building with a flat roof, 10x16 meters large, 10-12 meters high, with electric cables and telephone wires leading to it. There is a large weathercock on the roof. The building looks one or two years old at most.
 - b. Three steel masts, very similar in construction to electric power-line masts, about 45 meters high, arranged in a triangle, about 80 meters apart.
 - c. Three aerials hanging between the masts and insulated from them by about three large insulators. There is one lead from the middle of each aerial to the building. Two of the aerials have an apparatus at their tops similar to pulleys from which a rope hangs down to the ground, probably so that one end of the triangle formed by the aerials may be lowered as required.
 - d. Transformer, a brick, single-story building with a flat roof, 8x8 meters large, about 5 meters high. Near the transformer there are a number of large insulators and a high-frequency electric cable.
 - e. Wire fence, 2.5 meters high.
3. It cannot be ascertained by outside observation whether this is really a radio transmitting station, radio jamming station, or radar station. Few civilians have been observed at the station, but no military or police personnel.
